

ZenithPro March 2026

New Skills & Updates

Everything in this folder is ready to install. Each package has a Mac version and a PC version. Pick the one that matches your machine, unzip it, and run the installer inside.

1. ZenithPro Complete Demand Creation System

File: 1-ZenithPro-Complete-Demand-System-v1.zip (single zip, both platforms)

The full demand creation pipeline — now with three paths instead of one. Every market has a motivation direction. Some buyers move away from pain. Some move toward aspiration. Most are a mix. This system handles all three.

How to use it:

1. Run /motivation-spectrum-analyzer with your market description
2. It scores your market (e.g., “82% Away / 18% Toward”)
3. It tells you which path to run

The three paths:

Path	When to Use	Skills	Orchestrator
Away	Buyers escaping pain/frustration	10 skills	/demand-architect
Toward	Buyers aspiring to an identity	11 skills	/toward-demand-architect
Hybrid	Meaningful motivation in both directions	13 skills	/zenithpro

What each path produces: Desire hierarchy map, psychographic excavation, avatar profiles, pattern analysis, core concept candidates (validated + scored), buying state definition, belief gap map, USP, competitive intelligence, community architecture, and an integrated demand brief.

The Away Path is what you've had. The Toward and Hybrid paths are new.

2. Girard Deep Marketing System

Files: 2-Girard-Deep-Marketing-System-v1-mac.zip / -pc.zip

Eight skills built from René Girard's mimetic desire theory — applied to marketing. This isn't surface-level “people copy each other.” These skills were built from deep research into Girard's actual work and translated into practical marketing tools.

Skill	What It Does
girard-desire-autopsy	Reverse-engineers why a specific desire exists in your market
girard-desire-propagation	Maps how desire spreads through a market
girard-field-intelligence	Reads the current mimetic field around a product/market
girard-mimetic-content-strategist	Creates content that triggers mimetic desire
girard-model-map	Identifies who your prospects are imitating and why
girard-rivalry-detector	Finds competitive rivalries that create or destroy demand
girard-scapegoat-radar	Detects scapegoat dynamics in markets and messaging
mimetic-market-intelligence	Full competitive analysis through the lens of desire (not features)

Includes sample outputs so you can see what the skills produce before running them on your own market.

3. Veblen Status Psychology Skills

Files: 3-Veblen-Status-Skills-v1-mac.zip / -pc.zip

Seven skills built from Thorstein Veblen's work on status, conspicuous consumption, and social signaling — applied to modern marketing and pricing.

Skill	What It Does
veblen-status-intelligence	Full status analysis of your market
veblen-display-map	Maps how your prospects signal status
veblen-emulation-tracker	Tracks who is emulating whom in your market
veblen-price-ladder	Designs pricing that leverages status psychology
veblen-signal-decoder	Decodes what status signals your market responds to
veblen-waste-audit	Identifies “wasteful” spending patterns that reveal status needs
veblen-field-intelligence	Reads the status dynamics in a competitive field

Use these when pricing, positioning premium offers, or understanding why prospects buy expensive things they don't “need.”

4. Loewenstein Curiosity Architecture Skills

Files: 4-Loewenstein-Curiosity-Skills-v1-mac.zip / -pc.zip

Seven skills built from George Loewenstein's research on curiosity, information gaps, visceral states, and risk perception — applied to marketing and persuasion.

Skill	What It Does
loewenstein-curiosity-architect	Designs curiosity gaps into your marketing
loewenstein-anticipation-engine	Builds anticipation sequences that keep prospects engaged
loewenstein-empathy-gap-map	Maps hot/cold state gaps that affect buying decisions
loewenstein-information-flow	Controls information revelation for maximum engagement
loewenstein-risk-as-feelings	Addresses emotional risk perception (not just logical objections)
loewenstein-visceral-audit	Audits your copy for visceral triggers and gaps

Skill	What It Does
loewenstein-field-intelligence	Reads curiosity and information dynamics in your market

Use these for email sequences, webinar hooks, launch sequences, and anywhere you need to hold attention or build anticipation.

5. Claude Deep Research

Files: 5-Claude-Deep-Research-v1-mac.zip / -pc.zip

Sends your research question to Claude's built-in deep research capability and saves the results as organized markdown. Use this when you need thorough, multi-source research on any topic — market analysis, competitor research, trend analysis, historical context, or technical deep dives.

6. Course Factory

Files: 6-Course-Factory-v1-mac.zip / -pc.zip

The production version of the Guru demo Rich showed live. Takes a niche, researches YouTube channels in that space, downloads full channels, analyzes the content with AI, builds a course curriculum, runs a 6-writer copywriting arena competition for the sales copy, builds the landing page, and deploys it to Cloudflare. End to end, from idea to live page.

What it does, step by step:

1. You pick a niche and price point
2. It researches YouTube channels in that space
3. You approve which channels to download
4. It downloads full channel transcripts (shows count + cost estimate first)
5. Analyzes all content for topics, pain points, frameworks, gaps
6. Builds a full course outline (you approve before it continues)
7. Runs a copywriting arena competition for the sales page
8. Builds the landing page modeled after reference websites you specify
9. Deploys to Cloudflare

Requires: Gemini API key (free at aistudio.google.com/apikey). Optional: Deepgram key for higher-quality transcription. Also requires the copywriting-arena skill installed.

7. Strategic Builder v3

Files: 7-Strategic-Builder-v3-mac.zip / -pc.zip

A complete project lifecycle methodology that guides Claude Code through any significant build — from setup through deployment and archiving. Use this when you're building something non-trivial and want structure.

The phases: Setup → Build (translation stack with validation gates) → Test (5 categories) → Audit (independent, proportional to blast radius) → Optimize (3 layers) → Finish (complete/paused/abandoned with close-out) → Deploy → Archive

Keeps Claude Code disciplined on larger projects instead of freewheeling.

8. PPTX Presentation Skill

Files: 8-PPTX-Presentation-Skill-v1-mac.zip / -pc.zip

Creates professional PowerPoint presentations using Garr Reynolds' Presentation Zen philosophy — full-bleed images, minimal text, cinematic design. Claude Code generates the images with Gemini, builds each slide programmatically with pptxgenjs, and outputs a ready-to-present .pptx file.

What you get:

- Full-bleed background images (AI-generated via Gemini)
- Dark overlays with large, readable text
- Garr Reynolds design philosophy (signal-to-noise ratio, picture superiority, restraint)
- Automatic thumbnail generation for QA
- OOXML validation tools

Requires: Gemini API key (free) set as GEMINI_API_KEY environment variable. The installer will guide you.

9. Expert Content Processor

Files: 9-Expert-Content-Processor-v1-mac.zip / -pc.zip

Point it at any folder full of raw content — videos, audio files, PDFs, PowerPoints, Word docs, spreadsheets — and it converts everything to organized markdown. Then it organizes the files by program/module/topic, deduplicates, identifies gaps in the content, and creates a research prompt to help you find what's missing.

The workflow:

1. Give it a folder path and the expert's name
2. It inventories everything (shows you before processing)
3. Converts each file type to markdown (transcribes video/audio, extracts PDF/PPTX/DOCX text)
4. Organizes into logical folder structure
5. Removes true duplicates
6. Creates a gap analysis (what's missing?)
7. Creates a research prompt to find missing content

Works best with companion skills installed: video-transcription, pdf, pptx, docx, xlsx. Works without them but will skip file types it can't convert.

UPDATED: Claude Session Archiver

Files: UPDATED-claude-session-archiver-mac.zip / -pc.zip

If you already have the Claude Session Archiver installed, this update fixes a bug where **resumed conversations weren't being archived**. The archiver would only see the original session, not any new messages added when you resumed it.

What's new: A SessionStart hook (fix-session-index.py) that automatically detects and repairs the session index every time Claude Code starts. The installer registers the hook automatically.

If you don't have the archiver yet: This is the complete package — install it fresh and you'll have everything, including the fix.

Installation

Every package follows the same pattern:

Mac:

```
unzip [package-name]-mac.zip
```

```
cd [extracted-folder]
```

```
bash install.sh
```

Windows (PowerShell):

```
Expand-Archive [package-name]-pc.zip
```

```
cd [extracted-folder]
```

```
.\install.ps1
```

For the Complete Demand System (#1), unzip and follow the README.md inside — it has install instructions for each of the three paths.

Questions? Bring them to the ZenithPro call or post in the community.

These skills are the same ones Rich uses daily — they've been battle-tested across real client projects.
